Crop Health Report

Analysis ID: test-1234 | Generated: 2026-07-16 11:31 UTC

Status: Stressed	**Confidence:** 42%	**Severity:** Low

Capture Context

Captured: 2026-07-10T14:30:00

Location: Blida, Algeria

Weather on capture date

2026-07-10: 28.4°C avg, 19–34°C range, 41% humidity, 0.0 mm rain, 12 km/h wind

Annotated Image

Summary

The field shows mostly healthy foliage with one low-confidence stressed region.

Detailed Findings

Two regions were detected as healthy at high confidence (0.88, 0.79).

One region was flagged stressed at only 0.42, which is below the reliability threshold.

Recommendations

- Re-photograph the flagged area from closer range to confirm.
- Check soil moisture in the south section.
- Continue the current irrigation schedule.

The stressed flag is low-confidence; confirm before acting.

Raw Detections

#	Class	Confidence
1	healthy	88.0%
2	healthy	79.0%
3	stressed	42.0%
